OOTB BAKERY
NUT-FREE

Website content review

OOTB Bakery, all 13 pages, captured at 1440px

These are screenshots of the real site, not a mock-up or a text dump. Everything normally hidden behind a click has been opened first so you can read all of it in one pass:

- all six Services tab panels, expanded together
- all 20 FAQ answers, expanded
- all five Careers role cards, expanded
- the full description on each of the 6 Machines in Action clips (normally only visible in the lightbox)

One thing to know about the images

The machine that captured these cannot reach the photo and video hosts, so every image fell back to its local illustration. On your laptop, with a connection, these same slots show real photographs and industrial footage. The layout, the crops and the copy are exactly what you will see. Only the picture inside each frame differs.

NUT-FREE CONTRACT BAKERY IN ETOBICOKE, ONTARIO

Nut-free baking at private label scale.

OOTB Bakery is a certified nut-free contract bakery and private label manufacturer in the Greater Toronto Area. Bring us a recipe or a brief. We mix, bake, pack and ship it from one site at 288 Judson Street.

Request a Quote → See the line running

- NUT-FREE FACILITY
- BRCGS AND SQF
- CFIA LICENSED
- KOSHER AVAILABLE

100%
Nut-free site
Peanuts and tree nuts are not received at the bakery. Every ingredient is checked against its specification before it comes in.

7
Core bakery products
Cookies, biscotti, snowball cookies, meringues, mini loaves, frozen cookie dough and batters.

4
Pack formats
Bulk, retail-ready, individually wrapped and frozen, all packed in the same building.

10
QA checkpoints
From ingredient intake to dispatch, each one checked and recorded on every run.

WHAT WE DO

One partner from recipe to retail shelf.

Most brands end up managing a baker, a co-packer, a warehouse and a freight broker separately. We mix, bake, pack and dispatch in one building, under one food safety program, on one set of records.

Private label
Your brand on the pack, our bakery behind it. We bake, pack and label to your specification, so the bag, the label, the case

Contract baking
Your recipe, run on our equipment under our food safety program. You keep the formula. We run it, document it and ship it.

Recipe transfer and scale-up
Moving a kitchen recipe onto a production line changes it. We work through the changes with you before the first run, not

and the pallet are handled by the same team that baked the product.

- Your artwork and your pack format
- Retail-ready and club formats
- Bulk for further processing

- Formula stays yours
- Documented batch records
- Repeatable bake profiles

Read more →

after.

- Bench to line translation
- Ingredient substitution where needed
- Trial runs before commitment

Read more →

Packing in the same building

Bagging, heat sealing, shrink wrapping, labelling, case packing and display pack assembly, done on site as soon as the product has cooled.

- Automated bagging line
- Hand assembly for gift and display packs
- Case coding and pallet labelling

Read more →

Frozen dough and batters

Frozen cookie dough and muffin, cupcake and brownie batter, made and portioned so your team or your customer bakes it off fresh.

- Portioned frozen dough
- Batter in the format you need
- Held frozen until dispatch

Read more →

Storage and dispatch

Finished goods held on site and shipped as your orders land, so product never moves between buildings before it reaches you.

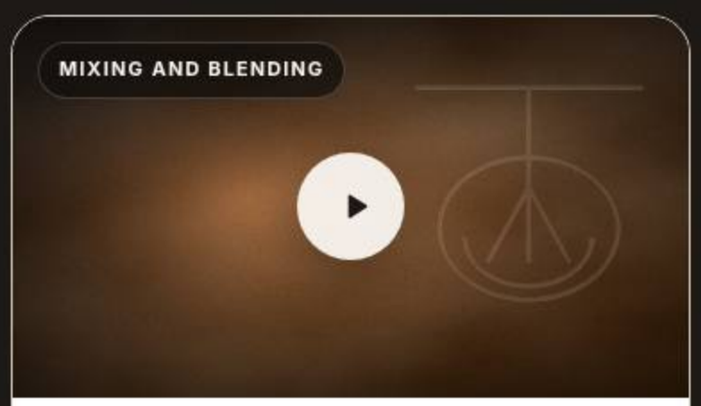

- Finished goods storage
- Pick and pack
- Case and pallet labelling

CERTIFICATIONS

The audit trail your buyer will ask for.

Retail and club buyers do not take your word for food safety, and neither should you. These are the schemes and licences behind the product we ship.

BRCGS

BRCGS

Global Standard for Food Safety. A GFSI recognised scheme, and the one most large retailers ask for when they audit a supplier.

SQF

SQF

Safe Quality Food certification, also GFSI recognised, and widely accepted by North American grocery and club retailers.

HACCP

HACCP

Hazard Analysis and Critical Control Points. The plan behind our critical controls, including metal detection and checkweighing.

Kosher

Kosher

Kosher certification for the products and lines that need it. It is product specific, so ask about yours.

CFIA

CFIA licensed

Licensed under the Safe Food for Canadians Regulations, which is what lets product move between provinces and be exported.

Nut free

Nut-free facility

No peanuts and no tree nuts come into the building, so there is no in-plant cross contact to manage.

Current certificates are available on request. Certification is product specific, so ask for the scope that covers your product.

WHO WE SERVE

Built for brands that have to ship, not just launch.

Private label for retail, co-packed product for distributors and repeat production for brands that have outgrown their own kitchen.

Start-up food brands

You have a product people like and no way to make it at volume. We take it from your recipe to a run you can sell, and tell you honestly what needs to change for it to work on a line.

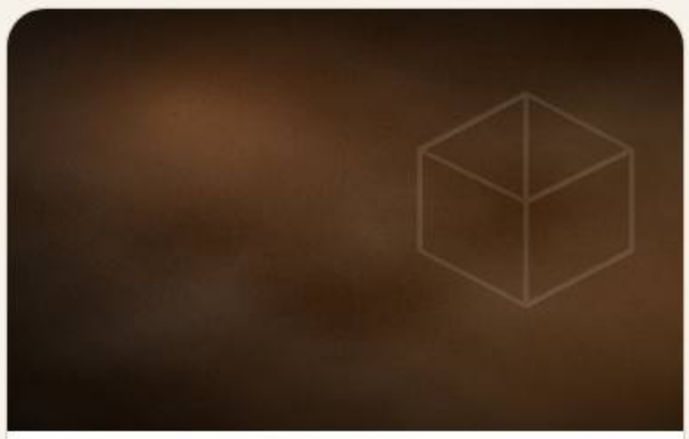

How we help →

Established food brands

You need capacity, a second source or a nut-free option you cannot run in your own plant. We slot in as a co-manufacturer without you handing over the formula.

How we help →

Grocery and club retail

You need private label baked goods with the documentation and audit trail your category team expects. We supply private label and co-packed product to national and regional grocery and club retailers.

How we help →

All six buyer types →

HOW IT WORKS

Six steps from first call to repeat supply.

No stage gets skipped. The order matters, because most of the cost of a bad production run is decided long before the line starts.

01

Brief and feasibility

You tell us the product, the format and the volume you are planning. We tell you what the bakery can run today, what would need to change and whether we are the right fit. If we are not, we say so early.

02

Sample and specification

We bake a sample against your reference product and write the specification with you. Ingredients, piece weight, appearance, pack format and shelf life get settled here, not halfway through production.

03

Scale-up trial

The approved sample is run on production equipment. Recipes behave differently on a line than in a kitchen, so this is where mixing, forming and bake profiles are set and recorded.

04

Food safety and documentation

Ingredients are approved, allergen status is confirmed, the HACCP plan is checked against the product and the batch records are set up. Nothing runs until this is done.

05

First production run

We run, check and release the first batch with your specification in hand. Metal detection and checkweighing are challenged at the start of the run and at set points through it.

06

Ongoing supply

Repeat runs are scheduled against your forecast. Finished goods can be held on site and shipped as your orders land, from the same building that made them.

Nut free site

Nut-free is a site decision, not a claim on a label.

Peanuts and tree nuts do not come into the bakery. That removes the hardest allergen problem in baking at the door, instead of trying to manage it with scheduling and cleaning. If your retailer or your customer needs a nut-free supply chain, this is the reason to talk to us first.

Our food safety program →

NEXT STEP

Tell us what you want to make.

Send the product, the format and the volume you are planning. We will tell you what we can run, what we would change and what we need from you to quote it.

ABOUT US

A nut-free bakery built for private label.

OOTB Bakery makes baked goods for other people's brands, and runs the whole job in one building at 288 Judson Street in Etobicoke: mixing, baking, cooling, packing, storage and dispatch.

WHO WE ARE

Everything between the recipe and the pallet, under one roof.

Most contract bakeries stop at the oven. You then find someone to bag it, someone to label it, someone to store it and someone to ship it. Every handoff is a place where your order can slip, and a place where nobody owns the problem.

We do all of it at 288 Judson Street. For you that means one specification, one set of batch records and one person to call when something needs to change.

The site runs nut-free. Peanuts and tree nuts do not come into the building, which takes the hardest allergen problem in baking off the table instead of managing it with cleaning schedules.

Request a Quote → See our facility

INSIDE THE PLANT

What production looks like on a normal day.

Mixing, forming, baking, cooling, packing and inspection, running to a written specification with records kept at every stage.

The short version

Ingredients are received, checked and recorded against their lot. Dry and wet ingredients are scaled to the formula. Dough or batter is mixed to a set time, formed or deposited to a target weight, baked to a set profile and cooled to packing temperature.

Cooled product runs through metal detection and checkweighing before it is packed, labelled, cased and palletised. Pre-operational sanitation is signed off by zone before any of that starts.

None of it is unusual. What matters is that it happens the same way every run, and that there is a record to show it.

Watch each stage →

WHAT SETS US APART

Four things you will not get from a bakery alone.

Say what we can actually run

The quickest way to waste your money is to agree to a product the line cannot hold. We would rather tell you no, or tell you what has to change, before you have bought packaging.

Keep the paperwork straight

Batch records, ingredient approvals, allergen statements and sanitation checks are done because they are how you trace a problem later. They are not an audit exercise.

Nut-free by design

Keeping peanuts and tree nuts out of the building is a harder commitment than managing them with cleaning and scheduling. It is also the only version a buyer can rely on.

One building, one set of records

Baking, packing, storage and dispatch happen on one site under one food safety program. Fewer handoffs means fewer places for your order to stall, and fewer people to chase when it does.

AT A GLANCE

The site, in one table.

What a supplier approval file usually asks for first.

Address	288 Judson St, Unit 16, Etobicoke, ON M8Z 5T6
What happens here	Ingredient receiving, mixing, depositing and forming, baking, cooling, packing, storage and dispatch
Allergen status	Nut-free site. No peanuts or tree nuts are received.
Food safety	GMP program, pre-operational sanitation by zone, metal detection, checkweighing, glass and brittle plastics control

Certifications	BRCGS, SQF, HACCP, Kosher and CFIA licensed. Current certificates on request.
Who we make for	Start-up and established food brands, grocery and club retailers, distributors, foodservice and cafe chains, meal kit and gifting companies
Visits	Plant tours by appointment

Facility detail and map →

NEXT STEP

Bring us the product you cannot make yet.

Tell us what it is, what format it needs to ship in and roughly what volume you are planning. We will tell you whether the bakery can run it and what it would take.

PRODUCTS

What we bake, and how it ships.

Every product below can be made under your brand, in the format your channel actually needs. Formats are the part most brands underestimate, so they are listed for each product instead of buried in a quote.

All products | Retail-ready | Bulk | Individually wrapped | Frozen

Filter by the pack format you need. Nut-free applies to everything on this page.

COOKIES

Cookies

Drop, formed and slab cookies baked to your recipe or developed with you from a reference product. Piece weight, spread and bake colour are set during scale-up and then held run to run. Inclusions are added at the point in the mix where they keep their shape.

FORMATS

- Bulk in lined cases for further processing
- Retail-ready bags or trays
- Individually wrapped for foodservice and gifting
- Frozen dough if you would rather bake off in store

TYPICAL BUYERS

- Grocery and club private label
- Cafe and foodservice chains
- Gifting and meal kit brands

Quote this product →

COOKIES

Biscotti

Twice baked, so the second bake is where the texture is won or lost. We set the slab bake, the slice thickness and the dry-out bake during scale-up and record them as part of the specification. Biscotti holds well in retail packs, which is why it travels so well through distribution.

FORMATS

- Bulk cases
- Retail-ready bags
- Individually wrapped singles or twin packs
- Display and point of purchase packs

TYPICAL BUYERS

- Cafe chains and roasters
- Grocery private label
- Distributors

Quote this product →

COOKIES

Snowball cookies

A short, crumbly cookie finished in icing sugar. The finish is the fragile part, so handling between cooling and packing is kept to a minimum and the pack is chosen to protect the coating in transit, not only on the shelf.

FORMATS

- Bulk cases
- Retail-ready tubs or bags
- Seasonal and gift pack assembly

TYPICAL BUYERS

- Seasonal and gifting programs
- Grocery private label
- Specialty retail

Quote this product →

CONFECTIONS

Meringues

Light, sugar based and very sensitive to moisture. Meringues need a controlled bake and a pack that keeps humidity out, which is where packing in the same building as the oven matters more than usual.

FORMATS

- Retail-ready bags and tubs
- Bulk for further processing
- Individually wrapped
- Moisture barrier packs

TYPICAL BUYERS

- Grocery private label
- Specialty and natural retail
- Gifting brands

Quote this product →

LOAVES AND CAKES

Mini loaves

Single serve and small format loaves, baked in pans and finished to the specification you set. A good fit for cafe counters, hotel and catering programs, and anywhere a whole loaf is more than the customer wants to buy.

FORMATS

- Individually wrapped
- Retail-ready multipacks
- Bulk for foodservice
- Frozen batter for bake-off

TYPICAL BUYERS

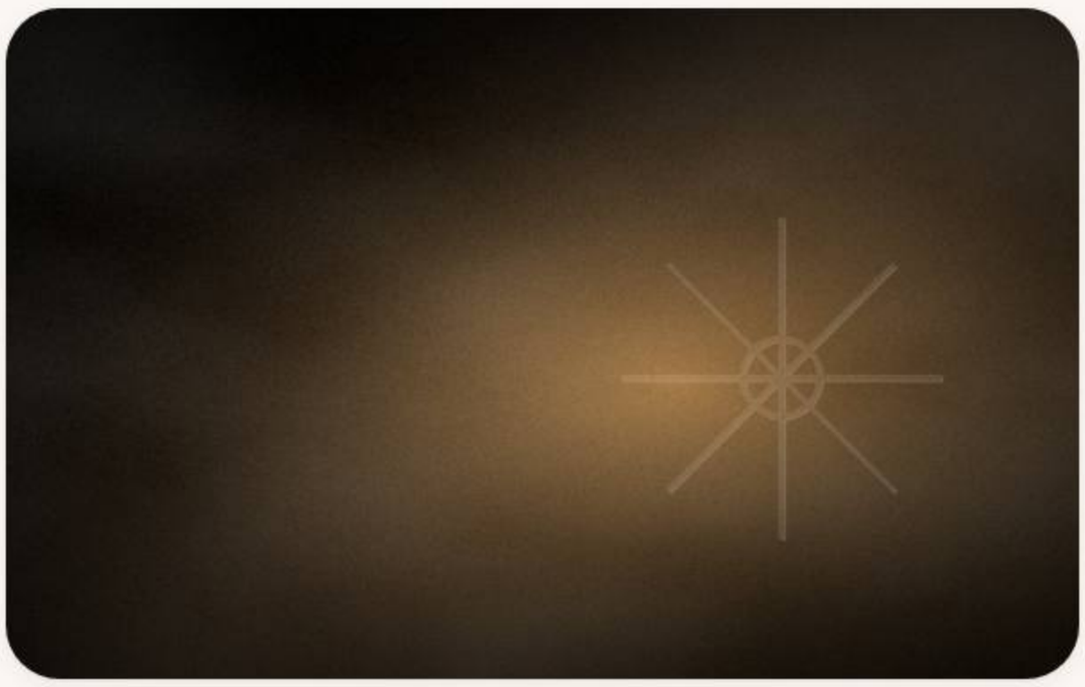

- Cafe and foodservice
- Hotel and catering
- Grocery private label

Quote this product →

FROZEN

Frozen cookie dough

Dough made, portioned and frozen so the bake happens at your site or your customer's. It is the simplest way to put a fresh baked cookie in front of a customer without putting a baker in every location, and it moves the shelf life problem off the finished product.

FORMATS

- Portioned pucks or pre-slabbed
- Bulk frozen in lined cases
- Retail frozen packs
- Held frozen on site until dispatch

TYPICAL BUYERS

- Cafe and restaurant chains
- Grocery in-store bakery
- Meal kit and subscription brands

Quote this product →

FROZEN

Muffin, cupcake and brownie batter

Batter made to your formula and packed for bake-off, so each site gets the same product without holding the recipe or the skill in house. The same batter can be baked and finished here if you would rather buy it ready to sell.

FORMATS

- Frozen in pails or lined cases
- Portioned for direct deposit
- Baked and finished here instead
- Held frozen on site until dispatch

TYPICAL BUYERS

- Foodservice and cafe chains
- In-store bakery programs
- Hotel and catering

Quote this product →

NOT ON THE LIST

If it is baked, nut-free and you can describe it, ask.

The products above are what the bakery runs today. New products go through the same route as everything else: a brief, a sample, a scale-up trial and a documented first run. If it will not work on our equipment we tell you at the brief stage, before you have bought packaging.

Describe your product → How co-manufacturing works

NEXT STEP

Tell us what you want to make.

Send the product, the format and the volume you are planning. We will tell you what we can run, what we would change and what we need from you to quote it.

BAKERY

288 Judson St, Unit 16
Etobicoke, ON M8Z 5T6

© 2026 OOTB Bakery. All rights reserved.

PRIVATE LABEL AND CO-MANUFACTURING

Six ways to use the bakery.

Most customers use more than one of these. They sit under one roof because a baked product almost never stops at the oven, and every extra supplier between the oven and the shelf is another place your launch date can slip.

Private label | Contract baking | Recipe transfer and scale-up | Packaging | Frozen dough and batters | Storage and dispatch

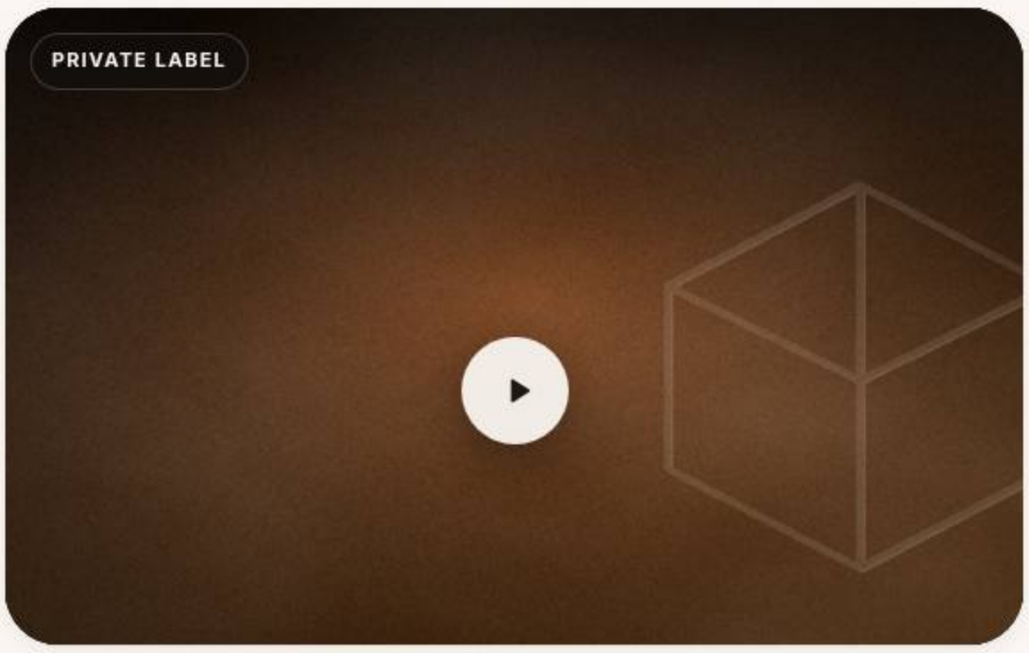

PRIVATE LABEL

Your brand on the pack. Our bakery behind it.

A private label program lives or dies on consistency. The buyer is not comparing you to your last run. They are comparing you to the national brand on the shelf beside you.

We bake to an agreed specification, pack into your artwork, and case and label it the way your distribution centre needs it. The bag, the label, the case and the pallet are handled by the same team that baked the product.

Request a Quote → | See the equipment

WHAT IS INCLUDED

- Baked to an agreed written specification
- Your artwork, pack format, case and pallet configuration
- Retail-ready, club and bulk formats
- Best-before coding and case labelling
- Display and point of purchase pack assembly
- Documentation your category team can audit

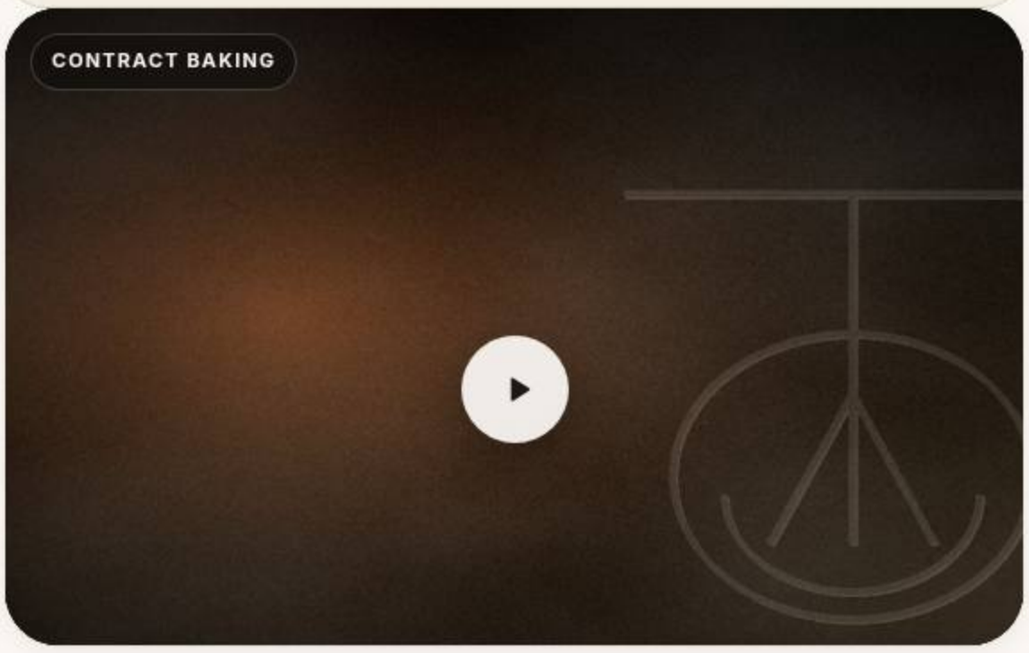

CONTRACT BAKING

Your recipe, run under our food safety program.

You keep the formula. We run it on our equipment, to your specification, with the records to show what happened on each batch.

This is the right route when you already have a product that sells and the problem is capacity, a second source, or a nut-free site you cannot create in your own plant.

Request a Quote → | See the equipment

WHAT IS INCLUDED

- Your formula stays yours
- Production on a nut-free site
- Batch records for every run
- Foreign body detection and checkweighing on the line

- ✓ Bake profiles locked in during scale-up
- ✓ Scheduled repeat runs against your forecast

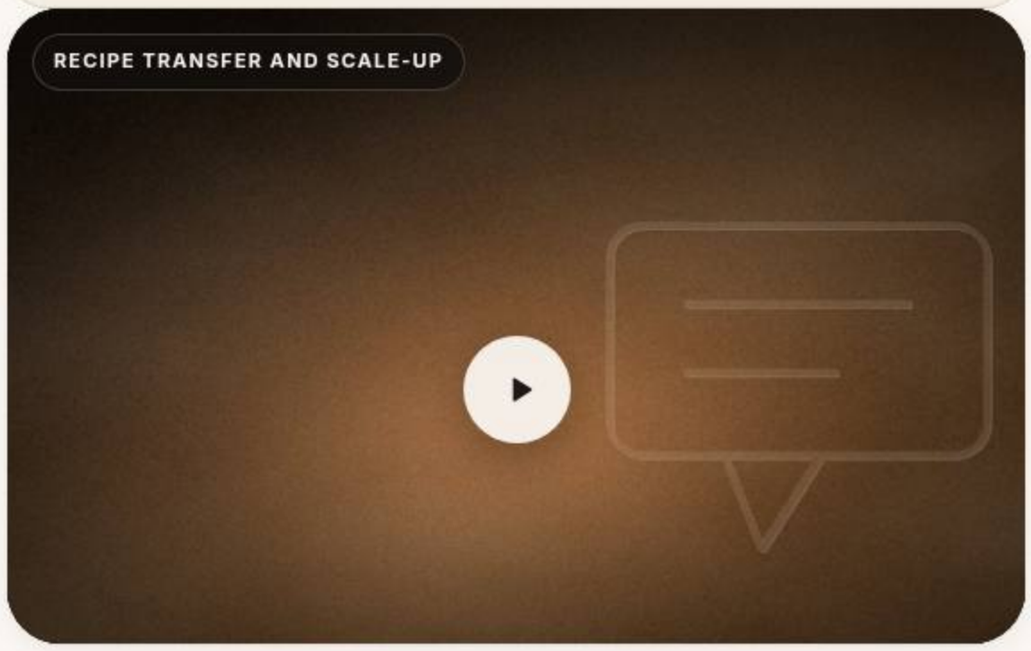

RECIPE TRANSFER AND SCALE-UP

A kitchen recipe is not a production recipe. We close the gap first.

Recipes change when they move onto a line. Mixing time, dough temperature, deposit weight and bake profile all behave differently at scale, and some ingredients simply do not work in a production environment.

We work through that with you before the first commercial run. You see the sample, you approve the specification, and then the line is set to reproduce it. Doing this after the packaging has been ordered is where most launches go wrong.

Request a Quote → | See the equipment

WHAT IS INCLUDED

- ✓ Bench to line translation
- ✓ Sample against your reference product
- ✓ Ingredient substitution where an ingredient will not scale
- ✓ Trial runs on production equipment
- ✓ Specification written and agreed before commitment
- ✓ Honest feedback when something will not work

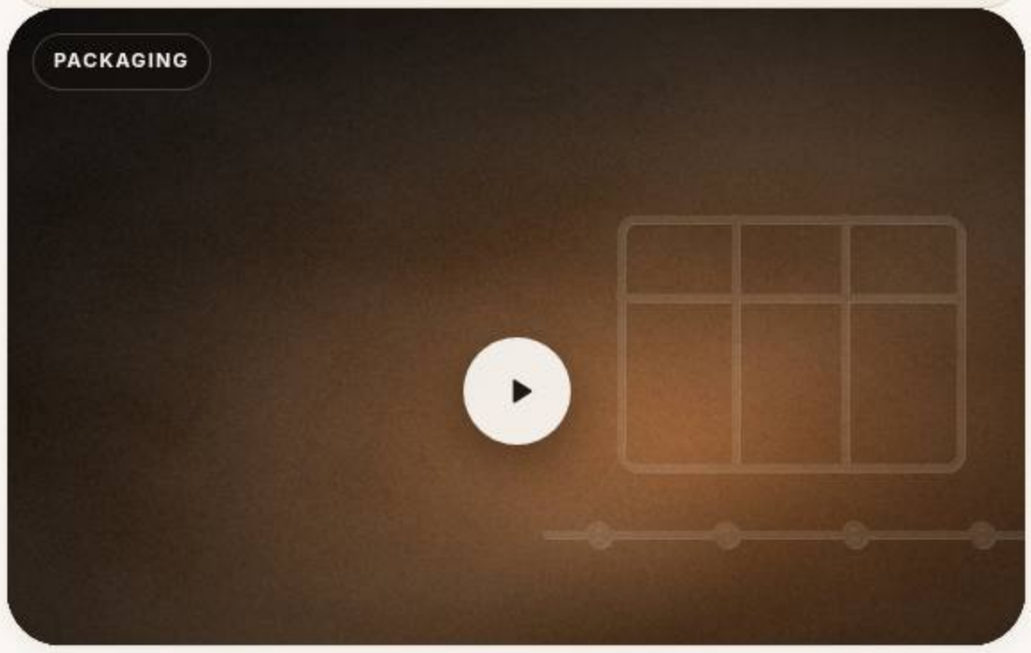

PACKAGING

Weighing, bagging, filling, wrapping and sealing on site.

Packing happens in the same building as baking, as soon as the product has cooled. Nothing travels to a second site to be finished.

Automated work and hand work sit side by side, so a pack that needs a machine for the bag and a person for the insert or the display tray does not have to move between two companies.

Request a Quote → | See the equipment

WHAT IS INCLUDED

- ✓ Multihead weighing and vertical form fill seal bagging
- ✓ Stand-up pouch filling and sealing
- ✓ Powder filling into jars, tubs, pouches and bags
- ✓ Flow wrapping for individually wrapped products
- ✓ Shrink wrapping
- ✓ Tub and container sealing
- ✓ Labelling, date and lot coding
- ✓ Checkweighing and X-ray inspection
- ✓ Case packing, strapping and pallet labelling
- ✓ Hand kitting and gift pack assembly
- ✓ Display and point of purchase packs
- ✓ Private label packaging

FROZEN DOUGH AND BATTERS

Move the bake to the point of sale.

Frozen dough and batter let each of your locations bake off fresh without holding the recipe, the equipment or the skill in house. It also moves the shelf life problem off the finished product, which is usually the hardest constraint on a baked goods program.

We make it, portion it and freeze it, and hold it frozen on site until it ships.

Request a Quote →
See the equipment

WHAT IS INCLUDED

- Frozen cookie dough, portioned or slabbed
- Muffin, cupcake and brownie batter
- Packed for bake-off at your site
- Bulk frozen in lined cases or pails
- Retail frozen formats
- Held frozen on site until dispatch

— STORAGE AND DISPATCH

Finished goods held and shipped from the same building.

Baking the product is half the job. Holding it, picking it and getting it onto a truck when the order lands is the half that usually gets handed to a third party who did not make it.

At 288 Judson Street finished goods go from the packing line into storage in the same building, so there is no transfer between sites and no second set of records.

Request a Quote →
See the equipment

WHAT IS INCLUDED

- Finished goods storage on site
- Pick and pack
- Case and pallet labelling
- Shipment coordination
- Stock held against your forecast
- Lot tracking from line to truck

— WHY IT SITS UNDER ONE ROOF

Fewer handoffs, fewer places to lose a week.

A typical baked goods launch involves a baker, a co-packer, a label printer, a warehouse and a freight broker. Each one has a different lead time, a different contact and a different idea of whose fault a delay is.

One specification

The document that describes your product is the same document the bake, the pack, the label and the case are built from. Nothing gets retyped between suppliers.

One set of records

Batch records, allergen statements, sanitation checks and shipping records all sit in one place, so tracing a problem does not mean emailing four companies.

One point of contact

When something changes, and it will, you are talking to the people who can change all of it, not one link in a chain.

NEXT STEP

Which of these do you actually need?

You may not know yet, and that is fine. Describe the product and the problem, and we will tell you which route fits and what it would take to run it.

Request a Quote →

MACHINES IN ACTION

What runs on the floor.

The equipment at 288 Judson Street, grouped by the job it does. Below it, short clips by process. Click any clip to open it full size.

EQUIPMENT

Grouped by the job it does.

Machines are listed by what they do rather than by brand, because the control around a machine matters more to your product than the name on it.

01

Mixing and blending

Planetary floor mixers
Doughs, batters and fillings, mixed in batches.

High shear mixers
Smooth batters, fillings and liquid blends.

V-blender
Dry ingredients and powders, blended evenly.

Grinder
Dry ingredients ground to size in-house.

02

Depositing and portioning

Cookie depositor
Cookie dough deposited or wire cut in even rows.

Vacuum filler and portioner
Dough and batter portioned by weight.

03

Baking

Commercial bakery ovens
Baked to the time and temperature set for each product.

04

Weighing and bagging

Multihead weigher with vertical form fill seal bagger
Portions weighed, then bagged and sealed from roll film.

Stand-up pouch machine
Stand-up pouches filled and sealed.

05

Powder filling

Powder filling machines
Powders dosed by weight into jars, tubs, pouches or bags.

06

Wrapping and sealing

Flow wrappers
Crackers, bars and cookies in individual flow packs.

Shrink wrapper and heat tunnel
Multipacks and trays shrink wrapped.

Container sealer
Tubs and containers lidded and heat sealed.

07

Coding and inspection

Code printer
Lot number and best before date on every pack.

Checkweigher
Every pack weighed in line. Off-weight packs rejected.

X-ray inspection
Finds foreign material such as metal, glass and stone, including inside foil packs.

Metal detector
Inline metal detection, challenged with test pieces through the run.

08

End of line

Strapping machine
Cases and bundles strapped for shipping.

09

Cotton candy

Cotton candy machines, large and small
Floss spun, packed into tubs and sealed.

Line capacity depends on the product and the pack format, so we quote it against your specification rather than as a headline number.

IN ACTION

Short clips, by process.

All processes | Mixing and blending | Depositing and portioning | Coding and inspection | End of line

6 clips. Clips play without sound and pause when they scroll out of view. Captions describe the process, not a specific machine model.

Batch mixing

Doughs and batters are mixed in batches to a set formula and a set time, so every batch behaves the same way on the line. Mix sheets are followed and signed off before the batch moves on. Ingredients are scaled under the same allergen controls as the rest of the plant.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

Dough development

The mixer develops the dough to the texture the product needs. Mix time and dough temperature are recorded against the batch, because both change how the product behbehaves further down the line. Inclusions go in at the point where they keep their shape.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

Portioned dough

Dough is portioned into even pieces and travels along the belt in rows. Piece weight is checked against the specification at set intervals during the run, because consistent weight is what keeps bake time and finished weight in range.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

Line inspection

Trained staff watch the line and pull anything that does not match the specification. Checks on weight, appearance and seal quality are recorded as the run happens, not at the end. Problems are caught while the run is still live.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

Packing line

Finished product is packed, cased and coded on the packing line. Labels, best before codes and case counts are checked at the start of the run and at set points through it. Changeovers between customers follow a written line clearance.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

Case sealing

Cases are sealed and staged by lot, ready to palletise. Pallet labels carry what is needed to trace the load in both directions. Finished goods go to storage or straight to dispatch.

FULL DESCRIPTION SHOWN, NORMALLY IN THE LIGHTBOX

See it live

Clips are useful. Standing on the floor is better.

If you are seriously evaluating the bakery, come and walk it. You will learn more in twenty minutes on the floor than from any amount of video, and we would rather you saw it before you commit to a run.

Book a plant tour →

NEXT STEP

Seen enough to talk specifics?

Send the product, the format and the volume. We will tell you whether it runs on this equipment and what we would need to change.

BAKERY

288 Judson St, Unit 16
Etobicoke, ON M8Z 5T6

© 2026 OOTB Bakery. All rights reserved.

FOOD SAFETY

Nut-free, audited, and written down.

Food safety is the part of a co-manufacturing relationship that only matters on the worst day. These are the schemes we work to, the nut-free program behind the claim, and the checks between a bag of flour arriving and a pallet leaving.

CERTIFICATIONS

Schemes, licences and what each one covers.

Rather than a row of logos, here is what each one actually means. Current certificates are available on request, and scope is product specific, so ask for the one that covers yours.

BRCGS

BRCGS

Global Standard for Food Safety. A GFSI recognised scheme, and the one most large retailers ask for when they audit a supplier.

SQF

SQF

Safe Quality Food certification, also GFSI recognised, and widely accepted by North American grocery and club retailers.

HACCP

HACCP

Hazard Analysis and Critical Control Points. The plan behind our critical controls, including metal detection and checkweighing.

Kosher

Kosher

Kosher certification for the products and lines that need it. It is product specific, so ask about yours.

CFIA

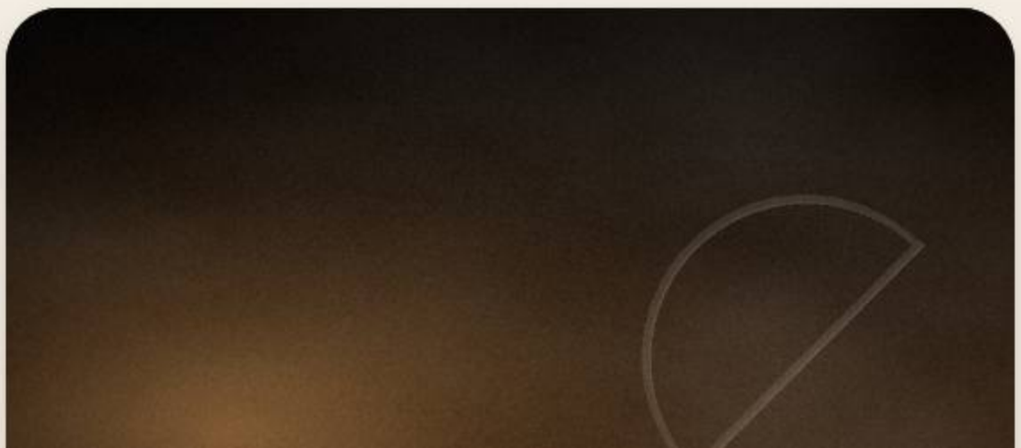

CFIA licensed

Licensed under the Safe Food for Canadians Regulations, which is what lets product move between provinces and be exported.

Nut free

Nut-free facility

No peanuts and no tree nuts come into the building, so there is no in-plant cross contact to manage.

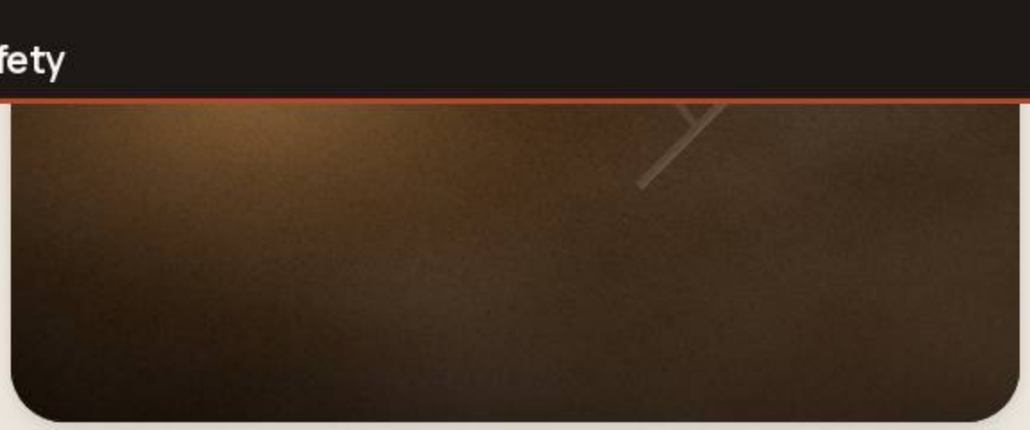

NUT-FREE PROGRAM

The strongest version of a nut-free claim.

There are two ways to make a nut-free product. You can run nuts in the plant and manage them with scheduling, dedicated equipment, cleaning and validation. Or you can keep them out of the building entirely.

We do the second. Peanuts and tree nuts are not received at the bakery, so there is no in-plant cross contact to control, no nut changeover to validate and no residual risk carried by a cleaning procedure.

The control that still matters is upstream. Every ingredient is approved against its specification before it is accepted, and nut-free status is confirmed on that specification, not assumed. If a supplier cannot support the claim, the ingredient does not come in.

What that means in practice

- No peanuts or tree nuts received at the site
- Ingredient specifications reviewed and approved before acceptance
- Allergen status confirmed per ingredient lot, not per supplier
- Written policy available for your supplier approval file

Ask us for the written nut-free policy and our supplier controls before you put a nut-free claim on your pack. You are the one who owns that claim to your customer.

QA CHECKPOINTS

From ingredient intake to dispatch.

Ten points where product is checked, held or released. None of it is exotic. What matters is that it happens on every run and that there is a record afterwards.

01

Ingredient intake

Ingredients are received against the purchase order and checked before they are accepted. Lot codes are recorded so every ingredient can be traced forward to the batches it went into. Allergen and nut-free status is confirmed on the specification for every ingredient, not assumed from the supplier name.

02

Storage and segregation

Ingredients are stored so lots stay separated and identified. Because the site is nut-free, the hardest segregation problem in a bakery is removed at the door instead of managed with scheduling.

03

Pre-operational sanitation

Zones are cleaned, inspected and signed off before production starts. Equipment, contact surfaces and the area around the line are all on the checklist. Production does not start on a zone that has not been released.

04

Mixing and scaling

Ingredients are scaled to the formula and mixed to a set time. Additions are weighed and recorded against the batch. Any deviation from the mix sheet stops the batch.

05

Forming and bake

Deposit weight and bake profile are held to the specification set during scale-up, and checked at intervals through the run. Product stays identified with its batch through the oven.

06

Cooling

Product is cooled to packing temperature before it is bagged. Packing warm product traps moisture and shortens shelf life, so cooling is a released step, not a queue.

07

Metal detection

Product passes an inline metal detector. The unit is challenged with test pieces at the start of the run and at set points through it, and the results are recorded. Rejects are held and reviewed, never returned to the line.

08

Checkweighing

Finished packs are weighed in line so weight problems are caught while the run is live. Checkweigher performance is verified on the same schedule as metal detection.

09

Packing and coding

Labels, best-before coding and case counts are verified at the start of the run and at set points through it. Line clearance between customers is written down and signed.

10

Release and dispatch

Product is released against its batch record, then palletised and labelled so the load can be traced in both directions. Held and rejected product is dispositioned, never quietly reworked.

TRACEABILITY AND RECALL READINESS

The question you should ask every co-packer.

Not whether they have ever had a recall. Whether they could run one properly tomorrow.

Trace forward

From an ingredient lot, we can identify the batches it went into and the finished pallets those batches produced. That lets you narrow a problem instead of pulling everything.

Trace back

From a finished pack code, we can identify the batch, the run conditions and the ingredient lots behind it. Batch and sanitation records for that run are kept.

Hold and disposition

Product that fails a check is held and dispositioned with a record, never quietly reworked into the run. Metal detection rejects are reviewed, not returned to the line.

Glass and brittle plastics

Glass and brittle plastic items on and around the line are on a register and inspected on schedule. A breakage triggers a defined response, not a judgement call.

GMP program

Written good manufacturing practice covers handling, personal hygiene, clothing, jewellery and movement between zones. It applies to visitors and contractors as well as staff.

Mock recall

Ask us when the last traceability exercise was run and what the recovery was. Ask every co-packer you are considering. The answer tells you more than a certificate does.

NEXT STEP

Want the documents before the conversation?

Tell us what your supplier approval process needs and we will send what we can: certificates, the nut-free policy, ingredient specifications and an outline of the HACCP plan for the products you are interested in.

BAKERY

288 Judson St, Unit 16
Etobicoke, ON M8Z 5T6

© 2026 OOTB Bakery. All rights reserved.

OUR FACILITY

One nut-free site at 288 Judson Street.

Ingredients come in one door and finished pallets leave by another. Mixing, forming, baking, cooling, packing, storage and dispatch all happen in the same building, under the same food safety program.

THE BAKERY

288 Judson Street, Etobicoke.

288 Judson St, Unit 16
Etobicoke, ON M8Z 5T6

This is where everything happens. The site runs nut-free: peanuts and tree nuts are not received here, so there is no nut changeover to validate and no residual risk carried by a cleaning procedure.

It sits inside the Greater Toronto Area, within easy reach of the major highways, the region's grocery and club distribution centres, and most of the ingredient suppliers a bakery depends on.

Book a plant tour →

See the line running

HOW PRODUCT MOVES THROUGH THE BUILDING

From the receiving dock to the truck.

Six stages, one building, one set of records. Product is identified with its batch at every step, so any finished pack can be traced back to the ingredient lots and the run it came from.

01

Receiving

Ingredients arrive at the dock and are checked against the purchase order and their specification before they are accepted. Lot codes are recorded at this point, which is where traceability starts.

02

Mixing

Ingredients are scaled to the formula and mixed to a set time. Mix records are kept against the batch.

03

Depositing and forming

Dough and batter are deposited or formed to a target weight, and checked at intervals through the run.

04

Baking and cooling

Product is baked to the profile set during scale-up, then cooled to packing temperature before it is touched again.

05

Packing and inspection

Product passes metal detection and checkweighing, then is bagged, wrapped or hand packed, coded, cased and palletised.

06

Storage and dispatch

Finished pallets go into storage in the same building and ship as orders land, labelled so every load can be traced back to its batch.

— VISITING

What a plant tour actually covers.

If you are evaluating us as a supplier, come and walk the floor. Bring your quality person. Ask hard questions.

Before you arrive

We send the visitor GMP requirements in advance: clothing, jewellery, footwear, and what you can and cannot bring onto the floor. Sign-in and a short briefing happen on arrival.

On the floor

You see the flow from receiving to dispatch, the metal detection and checkweighing points, and the sanitation and zoning setup. Ask to see records, not just equipment.

Afterwards

We go through your product, the format you need, the volume you are planning and what a trial run would involve. You leave knowing whether this is a fit.

Arrange a visit →

— NEXT STEP

INDUSTRIES

Six kinds of buyer. Six different problems.

A co-packer that treats a start-up and a national retailer the same way is failing one of them. Find the description that sounds like you and see what we would actually do about it.

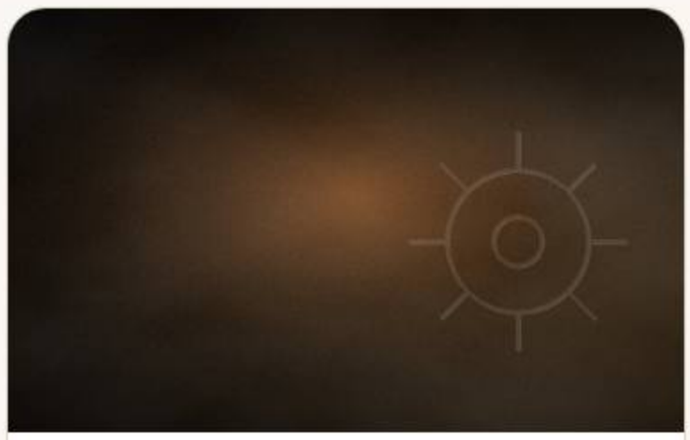

Start-up food brands

The problem: you cannot make enough of it.

You have a product that sells at markets, in a few independents or online, and demand has outgrown the kitchen. Every co-packer you call wants a volume you cannot commit to, and the ones that will talk to you want a specification you have never written.

- We start from a brief and a reference product, not a finished specification
- Scale-up trials on production equipment before you buy packaging
- Honest feedback when a recipe will not survive a line
- Packing, storage and dispatch in the same building, so you are not managing four suppliers

Talk about this →

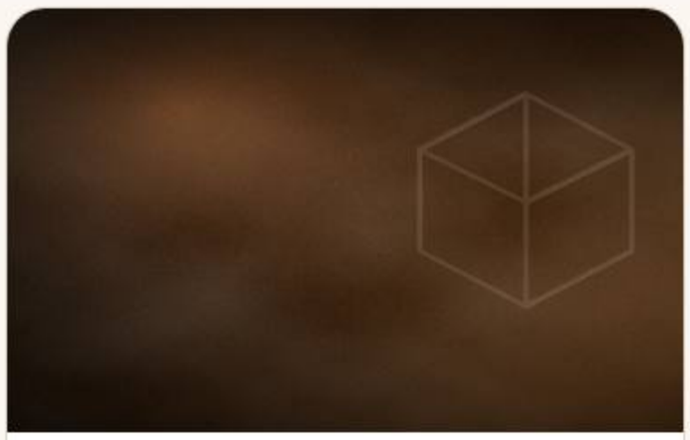

Established food brands

The problem: capacity, a second source, or an allergen you cannot manage.

Your own plant is full, or a retailer wants a second source, or a customer is asking for a nut-free version you cannot make safely in a facility that runs nuts. None of those are recipe problems, so you should not have to hand over the formula to solve them.

- Contract baking where the formula stays yours
- Production on a nut-free site with no in-plant cross contact
- Batch records and documentation your quality team can audit
- Scheduled repeat runs against your forecast

Talk about this →

Grocery and club retail

The problem: private label with an audit trail.

Your category team needs a supplier who can hold a specification run after run and produce the documentation when someone asks. Price matters, but a supplier who cannot answer a traceability question is a bigger risk than one who costs a few cents more.

- Private label and co-packed product for national and regional grocery and club retailers
- Retail-ready, club and display formats
- Case and pallet labelling to your distribution centre standard
- GFSI recognised certification and a traceability program behind every run

Talk about this →

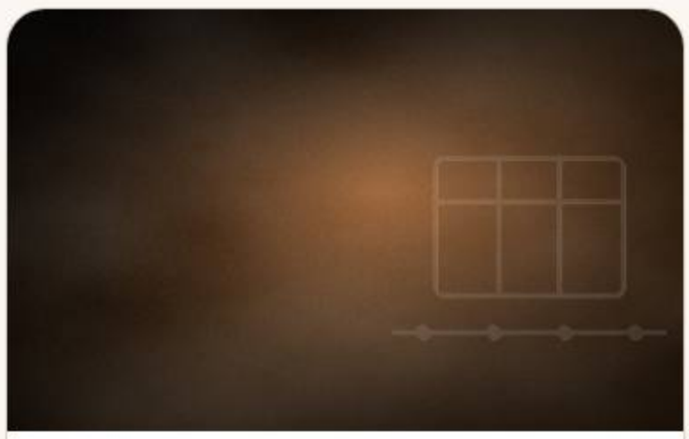

Distributors

The problem: supply that arrives clean and

Foodservice and cafe chains

The problem: the same cookie in every

Meal kit and gifting

The problem: components that survive the

on time.

You are not trying to develop a product. You need consistent supply, correct case and pallet labelling, and product that does not generate claims when it lands. A short shelf life or a mislabelled case costs you more than the margin on the line.

- Consistent product against a written specification
- Case and pallet labelling that scans first time
- Storage and dispatch from the same building that made the product
- Lot tracking from the line to the truck

Talk about this →

location.

Baking in store gives you a fresh product and an inconsistent one. Central baking gives you consistency and a shelf life problem. Frozen dough and batter is how most chains solve this, and it takes the skill requirement out of each location.

- Frozen cookie dough, portioned for bake-off
- Muffin, cupcake and brownie batter to your formula
- Individually wrapped and bulk formats for counter service
- Held frozen on site until dispatch

Talk about this →

box.

Your product is the box, not the cookie. You need portioned, wrapped or kitted components that arrive intact, in a pack format that fits your assembly line and does not add a nut allergen statement to the whole kit.

- Individually wrapped and portioned formats
- Hand kitting and gift pack assembly
- Nut-free production so the kit claim stays simple
- Display and point of purchase packs for seasonal programs

Talk about this →

COMMON GROUND

What every one of them needs.

The problems differ. The underlying requirement does not.

A product that repeats

The second run has to match the first. That is set during scale-up, not negotiated afterwards.

Records that hold up

Batch records, allergen statements and sanitation checks that survive an audit or a trace exercise.

A straight answer

Including when the answer is that we cannot run it, or that something has to change first.

One building

Baking, packing, storage and dispatch on one site, so nobody can point at somebody else.

NEXT STEP

None of those quite describe you?

Tell us the actual problem. Most of the interesting work comes from cases that did not fit a category on somebody's website.

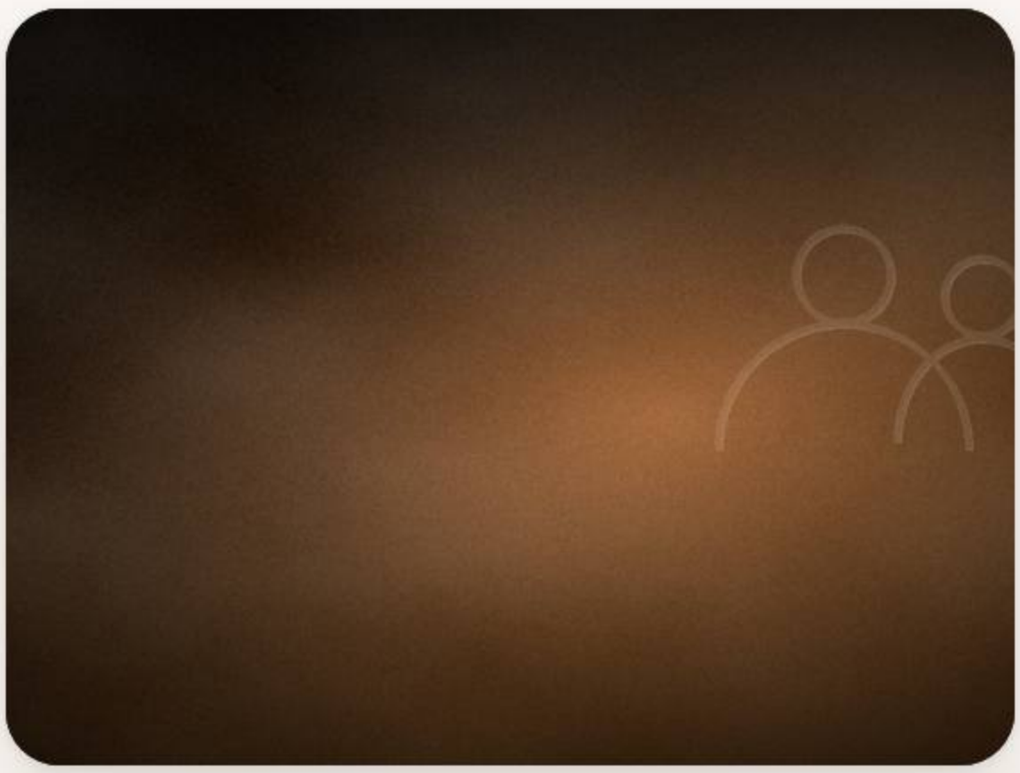

Request a Quote → See the line running

CAREERS

Work where the process is actually followed.

A food plant is a good place to work when the standard is real and a bad one when it is decorative. We run pre-operational sanitation by zone, we complete batch records as the run happens, and we expect people to stop a line when something is wrong.

WHY WORK HERE

What you can expect from us.

We are not going to list perks. Here is what actually shapes the day.

The honest version

- A written standard that gets followed, not filed
- Training on the process before you are expected to run it
- Permission to stop the line when something is wrong
- A nut-free site, which removes a whole category of risk
- One site, so you see the whole operation from mixing to dispatch
- Shift work in a food manufacturing environment

Pay, hours, benefits and scheduling are discussed directly during hiring. We do not publish them here because they vary by role and shift, and we would rather tell you the real numbers than a range you cannot rely on.

SAMPLE ROLES

The kinds of jobs this plant runs on.

These describe the work, not a specific open posting. If one sounds like you, apply and tell us which. Open positions change, so it is worth applying even if nothing is posted.

Production Associate

ETOBICOKE · SHIFT WORK · ENTRY LEVEL

Working on the line: mixing, depositing, tray handling, packing, and keeping the area clean and organised as you go.

WHAT YOU WOULD DO

WHAT WE LOOK FOR

- Run your station to the written process and the batch record
- Follow GMP for handling, clothing, jewellery and hand washing
- Flag anything that looks wrong instead of letting the run continue
- Keep your area clean through the shift, not only at the end
- Support changeovers and line clearance between products
- Reliable attendance and comfort with shift work
- Able to stand for a full shift and lift within a food production environment
- Careful and consistent, because the job is repetition done right
- Food production experience helps but is not required

Apply for this role →

Line Lead

ETOBICOKE · SHIFT WORK · EXPERIENCED

Running a line through a shift: the people on it, the product coming off it and the records that go with it.

WHAT YOU WOULD DO

- Set up and clear the line between products and customers
- Watch weight, appearance and seal quality through the run
- Complete batch records and in-process checks as the run happens
- Challenge metal detection and checkweighing at the set points
- Direct the associates on the line and train new starters

WHAT WE LOOK FOR

- Experience leading a line or a small team in food production
- Comfortable completing and standing behind written records
- Willing to stop a line when something is wrong
- Clear communication with the shift supervisor and QA

Apply for this role →

QA Technician

ETOBICOKE · SHIFT WORK · EXPERIENCED

Checking that what is written down is what actually happened, and holding product when it did not.

WHAT YOU WOULD DO

- Carry out pre-operational sanitation inspections by zone and sign them off
- Verify metal detection and checkweighing challenges and record the results
- Complete in-process checks against the product specification
- Manage the glass and brittle plastics register and inspections
- Support traceability exercises, audits and customer document requests

WHAT WE LOOK FOR

- Experience in a QA role in food manufacturing
- Working knowledge of HACCP and GMP
- Comfortable holding product and explaining why
- Accurate written records and attention to detail

Apply for this role →

Sanitation Lead

ETOBICOKE · SHIFT WORK · EXPERIENCED

Owning the state of the plant before production starts, which is the biggest single input into whether a shift goes well.

WHAT YOU WOULD DO

WHAT WE LOOK FOR

- Plan and run the sanitation schedule by zone
- Complete pre-operational inspections and present zones for release
- Control chemical use, concentrations and storage
- Keep sanitation records to an auditable standard
- Train and direct the sanitation team

- Experience in food plant sanitation, ideally in a certified facility
- Understanding of chemical safety and WHMIS
- Able to work the hours the schedule needs, often before production
- Thorough, methodical and willing to fail a zone

Apply for this role →

Maintenance Millwright

ETOBICOKE · SHIFT WORK · LICENSED TRADE

Keeping the equipment running and keeping every fix food safe, which is not the same job as keeping it running.

WHAT YOU WOULD DO

- Preventive and breakdown maintenance across bakery and packing equipment
- Support changeovers, installations and line trials
- Work to food safety rules on materials, lubricants and temporary repairs
- Keep maintenance records and parts information current
- Support the glass and brittle plastics program on equipment

WHAT WE LOOK FOR

- Millwright licence or an equivalent trade qualification
- Experience in a food manufacturing environment
- Mechanical and basic electrical troubleshooting
- Understands why a temporary fix with the wrong material is not acceptable in a food plant

Apply for this role →

FAQ

The questions people actually ask.

Grouped by where you are in the process. Where the real answer depends on your product we say so, instead of publishing a number that would be wrong for most of the people reading it.

01

Getting started

Before you send us anything, this is what the first conversation looks like.

What is the first step if I want you to make my product?

Send us the product, the format you need it to ship in and roughly what volume you are planning. A photo of a reference product and a rough recipe is enough to start.

We will tell you whether the bakery can run it as described, what would have to change, and what we would need from you to put a number on it. If it is not a fit, we say so at that point, before you have spent money.

Do I have to give you my recipe?

Not to start the conversation, and not at all under contract baking. Under contract baking the formula stays yours and we run it.

For private label or product development we do need to work on the formula with you, because that is the job. Either way, ask us about a confidentiality agreement before you send anything you consider sensitive.

What is your minimum order?

It depends on the product, the format and the packaging, so we do not publish a single number that would be wrong for most enquiries.

Minimums are driven by mix size, changeover time and the packaging you choose. Tell us what you are planning and we will give you the real minimum for that product.

How long does it take to get from first call to first production run?

That depends mostly on you, not on us. The parts we control are sampling, the scale-up trial and setting up the documentation.

The parts that usually set the timeline are your packaging lead time, your artwork approval and your ingredient decisions. We will give you a schedule once we know the product and the format.

Can you develop a product from scratch?

We can work from a reference product or a brief instead of a finished recipe. What we will not do

is promise a result before we have baked a sample.

The route is the same either way: brief, sample, specification, scale-up trial, then a documented first run.

02

Production

How a run actually works once you are a customer.

What products does the bakery run?

Cookies, biscotti, snowball cookies, meringues and mini loaves, plus frozen cookie dough and muffin, cupcake and brownie batter.

If you have something similar in mind that is not on the list, ask. New products go through the same brief, sample and trial route as everything else.

Will my product come out the same every run?

That is the whole point of the scale-up trial. Mixing time, deposit weight and bake profile are set on production equipment and recorded as part of the specification, so later runs reproduce the approved result.

In-process checks during the run keep it there. If something drifts, it gets caught while the run is live.

What happens if a batch fails a check?

It is held and dispositioned with a record. It does not quietly go back into the run.

Metal detection rejects are reviewed, never returned to the line, and you are told about anything that affects your product.

Can you run a trial before I commit to a full order?

Yes, and we would prefer to. A scale-up trial on production equipment is the only honest way to find out how a recipe behaves at volume.

Trials are quoted separately from production because they use line time and ingredients.

Do you make frozen dough and batter as well as baked product?

Yes. Frozen cookie dough and muffin, cupcake and brownie batter can be made, portioned and frozen for bake-off at your site or your customer's.

The same batter can be baked and finished here instead, if you would rather buy a finished product.

03

Food safety

The questions your quality team will ask, answered directly.

Is the bakery really nut-free?

Peanuts and tree nuts are not received at the bakery. That is a stronger control than running nuts and managing them with cleaning and scheduling, because there is no in-plant cross contact to control in the first place.

The control that still matters is upstream: every ingredient is approved against its specification before it is accepted, and nut-free status is confirmed there, not assumed. Ask us for the written

policy before you put the claim on your pack.

What certifications do you hold?

We work to BRCGS and SQF, operate a HACCP plan, offer Kosher certification on the products and lines that need it, and are CFIA licensed.

Certification is product specific, so ask us for the current certificates that cover the product you are interested in. Do not take a logo on a website as evidence, from us or from anyone else.

How do you handle traceability and recall?

Ingredient lots are recorded at intake, so we can trace forward from an ingredient to the batches and finished pallets it went into. From a finished pack code we can trace back to the batch, the run conditions and the ingredient lots behind it.

Ask us when the last traceability exercise was run and what the recovery was. Ask that of every co-packer you are considering.

What quality checks happen during a run?

Pre-operational sanitation is signed off by zone before production starts. During the run, deposit weight, appearance, seal quality, labelling and coding are checked at set points.

Metal detection and checkweighing are challenged with test pieces at the start of the run and at intervals through it, and the results are recorded against the batch.

Do you have a glass and brittle plastics program?

Yes. Glass and brittle plastic items on and around the line are on a register and inspected on schedule, and a breakage triggers a defined response, not a judgement call.

GMP covers handling, personal hygiene, clothing, jewellery and movement between zones, and applies to visitors and contractors as well as staff.

04

Packaging and logistics

What happens between the oven and your customer.

Can you pack into my own packaging?

Yes. Bagging, poly-bagging and heat sealing, shrink wrapping, labelling, case packing and pallet configuration all happen in house.

Send us your pack specification early. Packaging is the most common reason a launch date slips, and some formats need to be checked against the line before you order them.

Do you do retail-ready and display packs?

Yes. Display and point of purchase pack assembly, hand kitting and multipack assembly happen on site, alongside the automated bagging line.

Complex packs that need both a machine and a person are finished in one place, instead of moving between two companies.

Can you make seasonal or gift packs?

Yes. Seasonal and gift packs are assembled by hand on site, including display trays and multipacks.

Send us the pack specification early, because seasonal programs usually have fixed ship windows and the packaging lead time is often the longest part.

Can you store finished product and ship it as I need it?

Yes. Finished goods can be held at 288 Judson Street and shipped as your orders land.

Pick and pack, case and pallet labelling and shipment coordination happen in the same building that made the product, so there is no transfer between sites and no second set of records.

Can you ship direct to our distribution centre, or outside Ontario?

Yes. Product can be labelled and palletised to your distribution centre's standard and shipped direct. Send the receiving requirements with your first order.

For shipments outside Ontario or outside Canada, tell us where the product needs to land and we will tell you what is involved. CFIA licensing is what allows product to move between provinces and be exported.

NEXT STEP

Question not answered here?

Send it. We would rather answer a hard question early than have it come up after a production run.

PRIVACY

Privacy notice.

What we collect through this website, why we collect it and what we do with it.
Written to be read, not survived.

Last updated September 2026.

Who this applies to

This notice covers this website and the forms on it. In this notice, "we" and "us" mean OOTB Bakery, 288 Judson St, Unit 16, Etobicoke, Ontario M8Z 5T6.

What we collect

We only collect what you send us. That means:

- **Quote requests.** Your name, company, email address, phone number, business type, product category, estimated volume, target launch date, whether you need a nut-free product, and whatever you write in the message field.
- **Job applications.** Your name, email address, phone number, the role and shifts you are interested in, your resume and anything else you choose to tell us.
- **Direct contact.** Anything you send us by email or tell us on the phone.

We do not ask for payment details, government identification or health information through this website. Please do not send them.

Why we collect it

- To answer your enquiry and prepare a quote
- To assess a job application and keep it on file for future openings
- To keep records of business communications, which a regulated food business is required to do

We do not sell your information. We do not share it with anyone outside our business, except where we need a service provider to run the website or our email, or where the law requires it.

How long we keep it

Quote requests are kept as business records. Job applications are kept on file so we can consider you for later openings. If you want your information removed, ask us and we will remove it unless we are required to keep it.

Cookies and analytics

This site does not set advertising cookies and does not run third-party tracking. If analytics are added later, this notice will be updated before they go live.

Some content on this site loads from outside our own server: the photographs and video clips load from third-party image and video hosts, and the map on the facility and contact pages is embedded from Google Maps. Those providers may see your IP address when the content loads, and they are subject to their own privacy policies.

Where your information is stored

We are a Canadian business and our records are held in Canada. Some service providers we use may store or process data outside Canada. Where that happens, the information is subject to the laws of the country it is held in.

Your rights

Under Canadian privacy law you can ask us what personal information we hold about you, ask us to correct it, and ask us to delete it where we are not required to keep it. You can also withdraw consent for us to contact you.

To make any of those requests, email info@ootbinc.com or call (905) 291-1013.

If you are not satisfied with how we handle a request, you can raise it with the Office of the Privacy Commissioner of Canada.

Security

We take reasonable steps to protect the information you send us. No website or email system is completely secure, so please do not send anything highly sensitive through a web form.

Changes to this notice

If we change this notice we will update the date at the top of the page. Material changes will be flagged on the page, not made quietly.
